## WELCOME TO THE KWINANA GOLF CLUB

## CARE OF OUR COURSE

Please take a few minutes to read through this brochure. Your courteous actions on the course are appreciated by all players.

### DIVOT REPAIR

It is a requirement of the Club that each member carry a full sand bucket on their buggy when playing golf. Sand buckets are to be returned to the designated racks at the end of each round and not left in the car park or Clubhouse surrounds. Divots should be replaced and repaired by breaking in the edges with a golf club. Sand should be sprinkled onto affected areas to promote filling and regrowth.

### BUNKERS

Players should enter and leave by the low parts of bunkers and should, wherever possible, walk on the firm, rather than the soft sand. Players should carefully fill up and rake all holes and footmarks made in the bunker. After raking the bunker, the rake should be placed on the flat area of the bunker, its length laying parallel to the fairway.

### GOLF CARTS, GOPHERS AND BUGGIES

No buggy of any description is to be taken across putting surfaces. No motorised buggy is to be driven within 5 metres of any green or bunker and shall not be driven in the rough. Buggies are not permitted on tees.

### DAMAGE THROUGH PRACTICE SWINGS

In taking practice swings players should avoid causing damage to the course, particularly the tees, by removing divots.

### DAMAGE TO GREENS

Players should ensure, when putting down bags or the flagstick, that no damage is done to the putting green. Additionally, that neither they nor their caddies damage the hole by standing close to it when handling the flagstick or removing the ball from the hole. Twisting the flagstick as you remove it will prevent the accidental removal of the putting cup also. The flagstick should be properly replaced in the hole before the players leave the putting green.

Players should not damage the putting green by leaning on their putters, particularly when removing the ball from the hole. Players should also refrain from using either the putter head or any other foreign object to remove the ball from the hole.

Damage to greens caused by ball plug marks should be repaired with a divot repair fork or tee. Complete the repair by tapping down with a putter.

### BALL MARK / PITCH REPAIR

Ball marks, those indentations when a ball lands sharply on the soft green; have been ruining good putts since the days of old Tom Morris. Unrepaired or poorly repaired ball marks take two to three weeks to properly heal, leaving behind unsightly, uneven putting surfaces. On the other hand, a repaired ball mark only takes half the time to heal. A player who cuts or displaces any turf should ensure it is replaced and/or carefully repaired. Always carry a sand bucket and fill the divot hole with sand.

**1**  
Use a ballmark repair tool (preferably, a knife, a key or a tee

**2**  
Insert at the edges of the mark—not the middle of the depression

**3**  
Bring the edges together in a gentle twisting motion

**4**  
Smooth the surface with your club. Your done when it's a surface you would putt over.
